

JavaScript Operator Practice Questions

1. Perimeter of a Rectangle

- Take length and width as input.
- Calculate and print the perimeter.

2. Area of a Circle

- Take radius as input.
- Calculate area using the formula $\pi \times r^2$.
- Print the result.

3. Simple Interest

- Take principal, rate, and time as input.
- Calculate simple interest using $(P \times R \times T) / 100$.
- Print the result.

4. Temperature Conversion

- Take Celsius temperature as input.
- Convert it to Fahrenheit using $(C \times 9/5) + 32$.
- Print the converted value.

5. Average of 5 Numbers

- Take 5 numbers as input.
- Find their average.
- Print the result.

6. Swap Two Numbers

- Take two numbers as input.
- Swap their values.
- Print numbers before and after swapping.

7. Check Even or Odd

- Take a number as input.
- Check if it is even or odd using % operator.
- Print the result.

8. Square and Cube of a Number

- Take a number as input.
- Calculate its square and cube.
- Print both results.

9. Area of a Triangle

- Take base and height as input.
- Calculate area using $\frac{1}{2} \times \text{base} \times \text{height}$.
- Print the result.

10. Find Remainder and Quotient

- Take dividend and divisor as input.
- Calculate remainder and quotient.
- Print both results.
